

How to apply a theme to the CoCoS management Environment

Question or Case description

CoCoS can use a customized theme for it's management. By default, the selected CoCoS management theme is not applied to the login screen in order to prevent the origin or ownership of CoCoS from being publicly disclosed. To apply the theme on the login screen a trusted domain or ip must be entered in the "trusted domain" section of CoCoS.

Application

Describe in which application / in what way the problem occurred. The issue was noticed when a script was created to open a door using an IO device controlled by webhooks.

How To

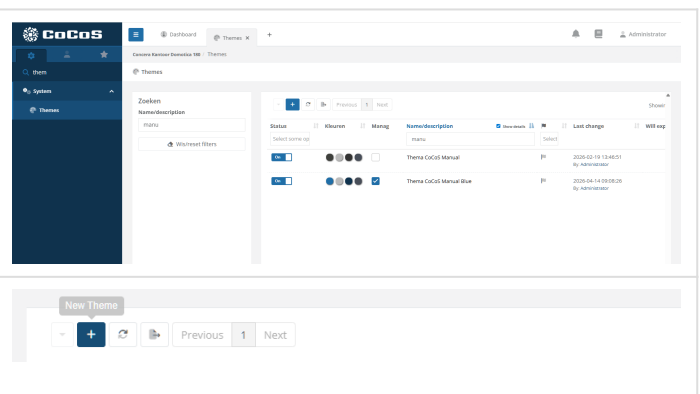

How to create a theme

Open the theme collection

Use the menu and navigate to the Theme collection located in the "System" section.

Applying a search for "theme" will get you there faster.

Use the [+] button to add a new theme

Create a new theme by entering the Name, various colors and images (logo's).

Main Color

The main color is used for CoCoS buttons such as [Save], [Save and Close], etc. This color is also used to derive variations when distinction between buttons and related elements is required.

Additional color

The additional color is use for color accents like badges, labels etc. Different tints are calculated based on this color and used for a variety of elements

Background color

The background color is used the for background of the menu. The lighter colors are derived from this base color.

Text color

The textcolor used on the background color of this theme.

Logo for light backgrounds

Described as "Logo (transparante afbeelding voor gebruik op witte/lichte achtergrond)", this logo is used on light backgrounds like on the login screen.

Logo for dark backgrounds

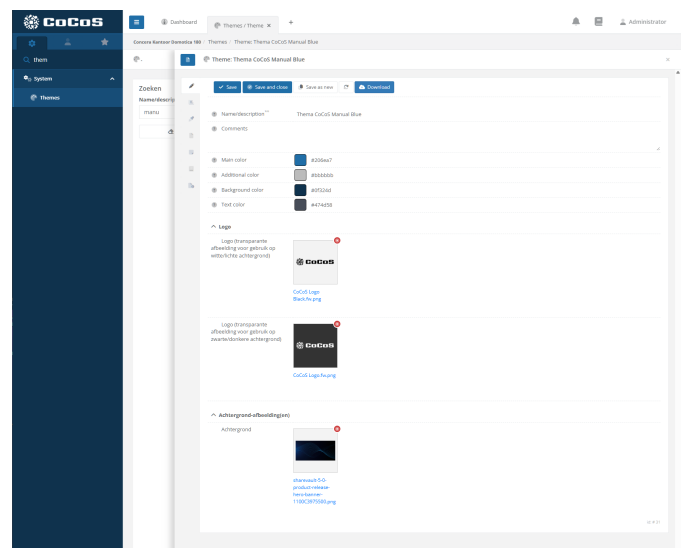

Described as "Logo (transparante afbeelding voor gebruik op zwarte/donkere achtergrond)", this logo is used on dark backgrounds like on the menu. Use an image with a transparent background.

Login Background Image

Imaged used as background for the login screen of cocos.

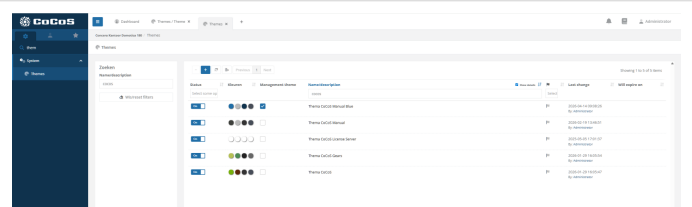

When finished, click [Save] to store the theme

To use the theme activate it in the list.

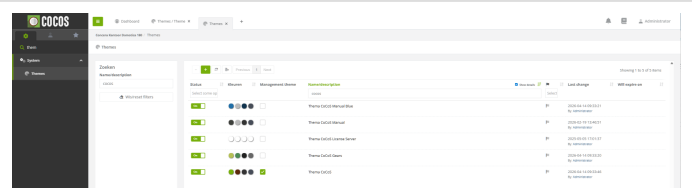

How to activate a theme for use in the management

To use a theme for the management, activate the checkbox "Management Theme".

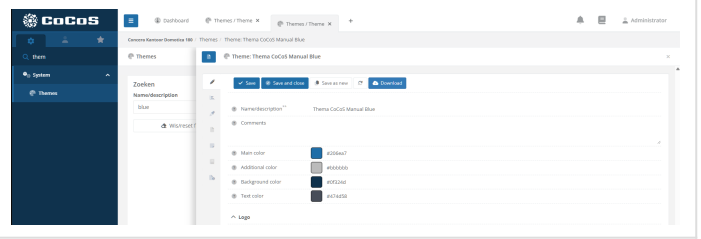

When selected the theme is applied instantly to the management application,

Note, the theme is not yet applied to the login screen. To apply the theme to the login screen a "trusted domain/ip" needs to be entered.

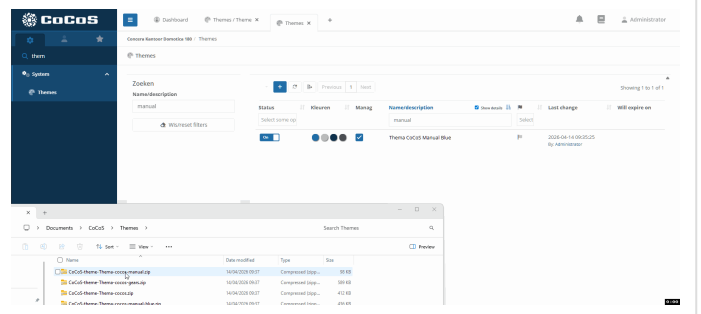

How to export a theme

To download a created theme, just hit the [Download] button in the theme.

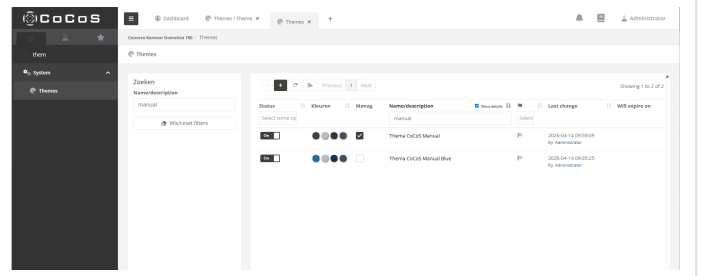

How to import a theme

To import a theme, just drag and drop the theme that was downloaded from an other system, into the list of the themes.

Enable the Theme and select is for use on the management application by clicking the checkbox in the "management theme" column. The theme will be applied instantly.

How to allow a theme to be used on the login screen using a trusted domain/ip.
